

Issue No. 3/2013: MAHLE LX 1025 air filter element – designed for two housing heights

MAHLE LX 1025 air filter element has been approved by vehicle manufacturers for use in two different applications with differing housing heights of 505.5 mm and 525 mm.

In order for the air filter element to be inserted in both housing sizes without any loss of functionality or

performance, a length expander fitted with adhesive pads is enclosed with every part. If the element is to be fitted in the 525 mm housing this expander should be attached to the bottom of the element with the adhesive pads. If the element is to be fitted into the 505.5 mm housing then the expander is not required and can be discarded.

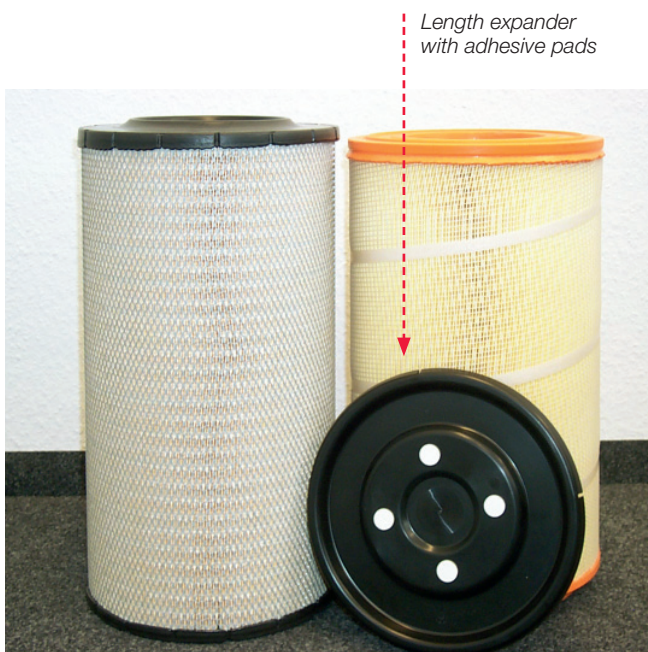

Figure 1: Filter height without length expander: 505.5 mm
